

RECOMMENDED CARE & MAINTENANCE

For Profilm Paint Protection Film (PPF) to perform at its best, we recommend the following care of your vehicle's exterior surfaces:

- ✓ Allow a two-week curing period after PPF installation before washing or polishing your vehicle.
- ✓ Thereafter, regular washing is recommended.
- ✓ Handwash with regular car shampoo.
- ✓ Hand polish only.
- ✓ If you do use a high-pressure washer to clean your vehicle, you should keep the nozzle at least 1 metre from film edges to prevent lifting. Set the washer jet to a wide spray.
- ✓ Treat your PPF with a flexible coating. Alternatively apply a non-abrasive polish twice yearly to maintain optimal gloss.
- ✓ Over time, and in extreme conditions, dirt may gather on the PPF surface. In such a situation it is recommended that the vehicle be returned to the installation centre for a gentle polish. This will lift the dirt and return the gloss.
- ✓ Remove insects, bird droppings or other stains as soon as they appear. Such contaminants may cause permanent etching if left on exterior surfaces for an extended period.
- ✓ Remove dirt build-up along the edges by using alcohol and a lint-free cloth.
